

FOR HOTELS & HOSPITALITY

Hotel risk, seen clearly.

Video-verified exception reporting from Lodge Security and Transpeye – the platform we already use to protect major retail customers.

What is Transpeye?

Transpeye is an all-in-one, cloud-based loss prevention and risk management platform. It takes data from your point-of-sale and other security systems, matches it to events and actions in the business, and lets you verify any exception on video – so you can see what actually happened, not just what the report says.

How it works for hotels

POS meets video

Voids, refunds, discounts and no-sales at restaurants, bars, spas and gift shops are matched to the footage – quickly separating genuine mistakes from genuine risk.

Policy-based, real-time alerts

Set the rules that matter to your property and get alerted the moment something falls outside them.

One view across every site

Dashboards and reporting across multiple venues and devices help you spot trends and exceptions group-wide.

Cloud simple

A modern, secure cloud platform that is quick to deploy and scales as you grow.

Why Lodge Security?

Lodge Security delivers security solutions across the UK, Ireland and South Africa. We know first-hand how Transpeye performs on busy retail floors – and the same approach suits the high-footfall, cash-and-card areas inside a hotel.

Where it can help in your property

- Restaurants, bars and room service
- Reception and front-desk cash
- Spas, gift shops and retail outlets
- Stores and high-value stock

Want to see Transpeye in action?
